

AI-Based Career Guidance System

Hello Everyone!

Presented by: Yeswanthraj. S | **ECE-C**

THE CHALLENGE

Problem Statement

Many college students are confused about choosing the right career path based on their skills, interests, and future opportunities.

- ❑ Career confusion is one of the biggest challenges facing students today — and it demands a smarter solution.

Why Do Students Need Career Guidance?

Confusion

Confusion about career choices and available paths

Awareness

Lack of awareness about different job roles and industries

Self-Knowledge

Difficulty identifying personal strengths and interests

Skill Gap

Uncertainty about required skills for desired careers

Opportunity

Lack of information about future job opportunities

Generic Advice

Over-dependence on general advice from family or peers

Design Thinking Approach

A **3-Stage Process** that puts students' needs at the center of every decision.

STAGE 1

Empathize

Before building anything, we listen. The Empathize stage is about deeply understanding students' real career-related challenges.

- Understand students' career-related challenges
- Identify their interests and skills
- Understand their expectations and concerns
- Study difficulties faced while selecting a career
- Recognize the need for personalized guidance

Define / Design

Core Problem

Students need an accessible and intelligent career guidance system that can understand their skills, interests, and goals and recommend suitable career paths.

Design Objective

**User-Friendly
Platform**

**Personalized
Recommendations**

Skill Analysis

**Career-Path
Guidance**

**Easy Access to Career
Information**

Ideate – AI-Based Career Guidance System

Proposed Solution: An AI-powered platform that analyzes student data and provides personalized career recommendations.

Student Skills

Interests

Academic Background

Career Preferences

Future Goals

Key Features of the AI System

AI Career Recommendations

Smart suggestions tailored to each student's unique profile

Skill Assessment

Evaluate student competencies across multiple domains

Skill-Gap Analysis

Identify missing skills and suggest improvement areas

AI Career Chatbot

24/7 conversational guidance for career queries

Resume & Interview Guidance

Practical preparation tools for career readiness

Multilingual Support

Accessible to students across language backgrounds

Benefits & Future Scope

Benefits

- **Informed Decisions**
Helps students make confident, data-driven career decisions
- **Reduce Confusion**
Minimizes career uncertainty and anxiety
- **Personalized Guidance**
Tailored recommendations based on individual strengths and goals
- **Career Readiness**
Prepares students for suitable careers proactively

Future Scope

- **Real-Time Job Market Analysis**
Live insights into job demand and emerging roles
- **College Integration**
Direct partnership with institutions for campus-wide deployment
- **Advanced AI Prediction**
Predict long-term career success using deep learning models
- **Personalized Learning Plans**
Curated learning journeys for each student's career path

Conclusion

Design Thinking helps us understand students' real career-related problems before developing a solution.

Our **AI-Based Career Guidance System** provides personalized career recommendations, identifies skill gaps, and guides students towards suitable career opportunities.
